FOR IMMEDIATE RELEASE

VOXCELL BIOINNOVATION AWARDED TOP PRIZE IN BUSINESS COMPETITION

Victoria, BC - There is no shortage of business competitions for start-ups in Victoria, BC and a brand new Biotech company has taken the top place at the Planit Business Plan contest hosted by the University of Victoria (UVic) and Coast Capital Savings. With the rigorous judging criteria and local Angel Investors on the judging panel, the competition was strong.

“The Coast Capital Savings Innovation Centre holds business competitions throughout the year as a chance to practise your pitch and win seed money for your venture.”

After submitting a robust Business Plan, VoxCell’s CEO Dr. Karolina Valente presented the pitch position of the competition to an audience of mentors, investors, and peers in the Victoria community. VoxCell will use the \$2000 cash prize for operational costs including some new materials for the lab and protecting IP.

After only a short five months of being in business, VoxCell has come onto the scene strong, winning many pitching and business competitions, participating in incubators and accelerators, and deepening connections within the community and exploding Biotech market.

About VoxCell BioInnovation

VoxCell BioInnovation is a biotechnology start-up in Victoria BC, working to change the world and positively disrupt the drug development industry and the field of tissue engineering with their flagship products, a 3D Bioprinter and novel Bioinks. Their goal is to reduce the time and costs associated with getting new drug therapies to market by allowing researchers and pharmaceutical companies to test sooner on truly biomimetic tissues.
